

High-Pressure Pumps in Ring-Section Design

Automation products available:

- PumpExpert
- Hyamaster
- hyatronic

Applications

- General water supply
- Pressure boosting
- Municipal water supply
- Drinking water supply
- Irrigation
- Heating
- Boiler feed water
- Warm water
- Hot water
- Circulation
- Condensate
- Distillate
- Industry
- Filter systems
- Solvents
- Fire-fighting systems
- Washing systems
- Reverse osmosis
- Lubricants
- Fuels
- Process
- Power plants

Operating data

| | |
|-----------------------|---|
| Pump sizes | DN 32 up to 150 |
| Capacities | Q up to 850 m ³ /h, 236 l/s |
| Heads | H up to 630 m |
| Operating temperature | t -10 °C up to +200 °C |
| Operating pressures | p ₂ 25 up to 63 bar ¹⁾ |
| Standard flanges | DIN |
| Suction nozzle | PN 16 (JL1040) and PN 25 (GP240GH+N, 1.4408) |
| Discharge nozzle | PN 40 (JL1040) and PN 63 (GP240GH+N, 1.4408) |
| Standard flanges | ASME |
| Suction nozzle | Class 125 (JL1040) and Class 300 (GP240GH+N, 1.4408) |
| Discharge nozzle | Class 250 (JL1040) and Class 600 (GP240GH+N, 1.4408) |

1) The total of inlet pressure and head at zero flow must not exceed the specified value

Design

Horizontal or vertical multistage centrifugal pump in ring section design, as long-coupled (baseplate mounted) or close-coupled unit.
Axial or radial suction nozzle. Radial suction and discharge nozzle can be turned in multiples of 90°.
Flanges to EN, DIN and ANSI (bolt holes, flange face)
Closed radial impellers, from pump size 50 upwards first stage with suction impeller to improve the NPSH value.

Bearings/Lubrication

Drive side: rolling element bearings
Suction side: plain or rolling element bearings, depending on installation type
Lubrication: Rolling element bearings grease lubricated, oil lubrication possible
Plain bearings are product lubricated.

Shaft seal

Standardized mechanical seal, uncooled or cooled, single-acting or double-acting.
Cartridge seals possible.
Uncooled gland packing with or without barrier liquid.

Designation

Materials

Cast iron JL1040,
Hydraulic elements: bronze CC480K-GS (water works variant), cast steel GP240GH+N, alloyed cast steel 1.4408

Drive

Electric motor 50 and 60 Hz;
Diesel engine or turbine up to n_{max}. 4000 1/min possible

Certification

Certification of quality management ISO 9001

Selection charts

n = 2900 1/min (1.4408)

n = 3500 1/min (1.4408)

Selection of material/shaft seal depending on the pumped liquid

| Pumped liquid | Material | | | Shaft seal | | | Notes |
|--|------------------------------|------------------|----------|---------------------------|----------|----------|--|
| | p ₂ max in bar | ≤ 140 °C | ≤ 200 °C | ≤ 100 °C | ≤ 140 °C | ≤ 200 °C | |
| Sewage, raw water ¹⁾ slightly contaminated water | 40 63 | 10 20 | | 63, 65 | | | Non-aggressive pumped liquid, no abrasive components |
| Drinking water ¹⁾ | 40 63 | 11, 12 25, 26 | | 65, 61 ⁵⁾ , 67 | | | Water works variant |
| Fire-fighting water ¹⁾ | 40 | 11, 12 | | 65, 61 ⁵⁾ , 62 | | | |
| Cooling water | 40 63 | 10 20 | | 65, 61 ⁵⁾ , 62 | | | Non-aggressive pumped liquid, no abrasive components |
| Boiler feed water ²⁾ Operating mode AF, pH > 9 (objective ≥ 9.3) at 25 °C | 40 63 | 10 20 | 20 20 | 65, 61 ⁵⁾ , 62 | 66, 62 | 64 | O ₂ content ≤ 0.02 mg/kg |
| | 40 63 | 22 22 | 22 22 | 65, 61 ⁵⁾ , 62 | 62 | 64 | |
| Boiler feed water ²⁾ Operating mode AFT, pH > 9 (objective ≥ 9.3) at 25°C | 40 63 | 10 20 | 20 20 | 65, 61 ⁵⁾ , 62 | 66, 62 | 64 | O ₂ content ≤ 0.02 mg/kg |
| | 40 63 | 22 22 | 22 22 | 65, 61 ⁵⁾ , 62 | 66, 62 | 64 | |
| Boiler feed water ²⁾ Operating mode NF, pH ≥ 6.5 at 25 °C | 40 63 | 30 30 | 30 30 | 61 ⁵⁾ , 62 | 62 | 64 | O ₂ content ≥ 0.05 mg/kg |
| Boiler feed water ²⁾ Operating mode KF, pH ≥ 8 - 8.5 at 25 °C | 40 63 | 22 22 | 22 22 | 65, 61 ⁵⁾ , 62 | 66, 62 | 64 | O ₂ content 0.15 up to 0.3 mg/kg |
| Condensate ²⁾ Operating mode AF, pH > 9 (objective ≥ 9.3) at 25 °C | 40 63 | 10 20 | 20 20 | 61 ⁵⁾ , 62 | 62 | 64 | O ₂ content ≤ 0.02 mg/kg temperature ≤ 190 °C ⁴⁾ |
| Condensate ²⁾ Operating mode NF, pH ≥ 6.5 at 25 °C | 40 63 | 30 30 | 30 30 | 61 ⁵⁾ , 62 | 62 | 64 | |
| Condensate ²⁾ Operating mode KF, pH ≥ 8 at 25 °C | 40 63 | 22 22 | | 65, 61 ⁵⁾ , 62 | 66, 62 | 64 | O ₂ content ≥ 0.15 mg/kg temperature ≤ 110 °C ⁴⁾ |
| Raw water for reverse osmosis plants | 40 63 | 30 30 | 30 30 | 61 ⁵⁾ , 62 | 62 | 64 | For higher chloride content (sea water) contact KSB In case of prolonged shutdown, drain and flush the pump |
| Oil-water mixture, oil emulsion | 40 63 | 10 20 | | 65, 63 | | | |
| Glycol-water mixtures | 40 63 | 10 20 | | 65, 61 ⁵⁾ , 62 | 66, 62 | | |
| Degreasing baths, washing solution for metal cleansing, alkaline cleaning agents | 40 63 | 10 20 | | 65, 63 | | | ³⁾ e.g. P ₃ -lye for acid baths please contact KSB |
| Chp rmovalimulsion for aluminium machining | 40 63 | 10 20 | | 68 | | | |

- 1) General assessment criteria when a water analysis is available: pH value ≥ 6.5; chloride content (Cl⁻) ≤ 150 mg/kg, chlorine (Cl₂) ≤ 0.6 mg/kg. For bronze components, the following additional limits apply: ammonia (NH₃) ≤ 5 mg/kg, free of hydrogen sulphide (H₂S); the limitation of the Cl⁻ content does not have to be applied in this case. If these limits are not complied with, please contact KSB.

- 2) The values must be assured upstream of the pump inlet under all operating conditions. Water treatment shall comply with the VdTÜV regulations for feed and boiler water grades for steam plants up to 64 bar.
Air ingress into the system must be avoided by all means. We therefore recommend to use a mechanical seal as a shaft seal.

Notes for the suction pipe layout:

Max. flow velocity approx. 1.5 m/s, low pressure loss arrangement (few pipe fittings/valves, low drag valves, e.g. gate valves instead of globe valves, pipe arrangement short and vertical, horizontal sections should be located at the deepest position). Using impellers made of G-CuSn10 is only possible when no additives containing ammonia (e.g. Hydrazin) are used for water treatment.

- 3) max. 80 °C; pH value > 9.5
4) Values drawn from experience
5) See application limits on page 6

AF = Water is fully demineralised, pH value set to > 9 (e.g. using ammonia).

AFT = Water is partly demineralised, pH value set to ≥ 9, mainly with solid alkalis, possibly additional dosing of ammonia.

NF = Water is fully demineralised, pH value ≥ 7.8, O₂ content increased to ≤ 0.05-0.25 mg/kg by adding oxygen or hydrogen peroxide.

KF = Water is fully demineralised, alkalised to pH values from 8 to 9, O₂ content increased to ≤ 0.03-0.15 mg/kg by adding oxygen or hydrogen peroxide.

Operating ranges depending on installation type

Heads given fpr n=2900 1/min and n=3500 1/min

Technical Description

| Installation type | Technical description | | |
|---|--|-----------------------------|--|
| Installation type A⁴⁾ | Horizontal design, baseplate mounted, rolling element bearings on drive side, plain bearings on suction side, one shaft seal only, axial suction nozzle (block flange up to pump size 50), drive on discharge side For the entire Q/H range | Drive | Electric motor, Diesel engine, turbine |
| Installation type B⁴⁾ | Same as installation type A, but with radial suction nozzle | Axial thrust balance | By balance drum ¹⁾ |
| | | $Q_{\max}^2)$ | 840 m ³ /h |
| | | H_{\max} | 630 m |
| | | $P_2 \max$ | 63 bar |
| | | t_{\max} | -10 up to +200 °C |
| | | Shaft seal | Uncooled packing; cooled or uncooled mechanical seal single or double-acting Cartridge seals |
| | | Material | Grey cast iron JL1040, bronze CC480K-GS, cast steel 1.0619+N, 1.4408 |
| Installation type C⁴⁾ | Horizontal design, baseplate mounted, rolling element bearings on drive and suction side, shaft seals at both ends, drive on discharge side For the entire Q/H range | Drive | Electric motor, Diesel engine, turbine |
| | | Axial thrust balance | By balance drum ¹⁾ |
| | | $Q_{\max}^2)$ | 840 m ³ /h |
| | | H_{\max} | 630 m |
| | | $P_2 \max$ | 63 bar |
| Installation type D⁵⁾ | Same as installation type C, but drive on suction side | t_{\max} | -10 up to +200 °C |
| | | Shaft seal | Uncooled packing; cooled or uncooled mechanical seal single or double-acting Cartridge seals |
| | | Material | Grey cast iron JL1040, bronze CC480K-GS, cast steel 1.0619+N, 1.4408 |
| Installation type E⁴⁾ | Horizontal close coupled pump, common bearing for pump and motor, rigid coupling, radial suction nozzle up to DN 65 | | E, F |
| | | Drive | Standardized motor |
| | | Axial thrust balance | By balance drum |
| | | $Q_{\max}^2)$ | 100 m ³ /h |
| | | H_{\max} | 250 m |
| Installation type F⁴⁾ | Same as installation type E, Ex, but with axial suction nozzle up to DN 65 | $P_2 \max$ | 40 bar |
| | | t_{\max} | -10 up to +140 °C |
| | | Shaft seal | Uncooled packing; uncooled mechanical seal single-acting |
| | | Material | Grey cast iron JL1040, bronze CC480K-GS, other materials on request |
| Installation type V⁴⁾ | Vertical close coupled pump Q/H range ²⁾ : 2-pole: up to $Q_{Opt}=120$ m ³ /h, 630 m up to $Q_{Opt}=240$ m ³ /h, 400 m 4-pole: up to $Q_{Opt}=340$ m ³ /h, 250 m | Drive | Standardized motor - fixed bearing, drive-end |
| | | Fixed bearing in lantern | DN 32 DN 50 DN 65 |
| | | | DN 100 DN 125 DN 150 |
| | | Held by motor bearing | By balance drum |
| | | Axial thrust balance | by balance drum |
| | | $Q_{\max}^2)$ ³⁾ | 100 m ³ /h |
| | | H_{\max} ³⁾ | 630 m |
| | | $P_2 \max$ ³⁾ | 63 bar |
| | | t_{\max} | -10 up to +140 °C |
| | | Shaft seal | Uncooled packing; uncooled mechanical seal single-acting |
| | | Material | Grey cast iron JL1040, bronze CC480K-GS, cast steel 1.0619+N, 1.4408 |

- 1) For small number of stages without balance drum: axial thrust fully held by the axial bearings
 2) N.B.: The values given for Q apply to 50 Hz; for 60 Hz values please refer to the specific performance curves.

- 3) Other operating data on request
 4) Clockwise drive rotation when viewed from the motor end
 5) Anti-clockwise drive rotation when viewed from the motor end
 6) On Multitec 32 - 50 - 65 the motor bearings on the coupling side are fixed bearings

Pressure and temperature limits

Material JL1040 (GJL-250)

Material 1.4408

Shaft seal code 2)

Mechanical seal

| | Uncooled mechanical seal | Cooled mechanical seal |
|---|--|------------------------|
| Temp. limits | up to 100 °C | up to 140 °C |
| Non-balanced bellows-type seal RMG 13 (U ₃ BEGG) | 61 ^{1) 4)} pump sizes 32 and 50 only | - |
| Balanced seal H12N (AQ ₁ BEGG) | 62 ⁴⁾ | 62 ⁴⁾ |
| Balanced seal Solids-laden media H17GN (Q ₁₂ Q ₁ VGG) ⁶⁾ | 63 ⁵⁾ | - |
| Balanced seal H75N (AQ ₁ BEGG) | - | - |
| Balanced seal H17GN (Q12BEGG) | 67 ^{4) 6)} | - |
| Non-balanced bellows-type seal MG13 (U3U3VGG) | 68 ^{5) 7)} pump sizes 32 to 65 only | - |
| Balanced seal HRN (AQ1EMG) | 69 ^{4) 8)} | 69 ^{4) 8)} |

Gland packing

| | P _{max} | up to 100 °C (GRAFIT / PTFE) | up to 140 °C (GRAFIT / PTFE) |
|----------------------|------------------|------------------------------|------------------------------|
| without balance drum | 25 bar | | |
| with balance drum | 63 bar | 65 ⁵⁾ | 66 ⁴⁾ |

| Design | N/b | N/c |
|--------------------|--|---|
| Plant conditions | with suction head operation P _S abs. ≥ 1 bar | P _S abs. < 1 bar (vacuum vessel) with clean external sealing liquid barrier pressure > pressure to be sealed |
| Technical features | without lantern ring | 1 lantern ring on suction side 1 lantern ring on discharge side 2 tapped holes for auxiliary pipework |

1) P_{max} without balance drum = 18 bar; P_{max} with balance drum = 63 bar

2) Other seal variants on request

3) Air-cooled up to DN 100 (installation types A, B, C and D, electric motor IP 55, 2-pole, only); otherwise water-cooled.

4) static seals in EPDM

Material GP240GH+N (1.0619+N)

5) static seals in FPM

6) H7N for pump size 150

7) MG1S4 for pump size 65

8) For suction lift operation

1) For pump sizes DN 32 up to 100

6) Integrated in stage casing of pumps sizes 32 to 100.

2) For pump sizes DN 125 and 150

7) Pump sizes 125 and 150 only, and casing wear ring in suction casing for pump sizes 32 to 100 of material variants 20 to 30

3) Up to t ≤ 140 °C

8) For pump sizes 32 to 100 only, also used as casing wear ring

4) Available in material 1.4021

5) Only provided for seal codes 61, 62, 63, 64, 69 (no packing)

Benefits at a glance

1st stage with special suction impeller

- low NPSH required
- reliable for suction lift operation thanks to improved suction behaviour

Adaptation of the material
from many possible options
(JL 1040, Bronze,
GP240GH+N, 1.4408)

Plain bearings made of silicon carbide

- Longer service life
- Higher reliability
- Low maintenance costs
- One shaft seal only
- Dimensioned for start-stop operation and all speeds

Shaft sealed by

- Uncooled gland packing up to 140 °C
- Standardized mechanical seal, balanced or non-balanced
- Uncooled up to 140 °C, cooled up to 200 °C
- Single or double-acting, cartridge seals

Shaft protecting sleeve made of alloyed steel

- Efficient protection of the shaft from wear
- Quick and simple replacement of the shaft seal

Axial inlet
pump size ≥ 65

Mechanical seal,
single-acting

Double acting
mechanical seal, e.g.
tandem arrangement

Installation type E

Installation type V;
Separate rolling element bearing
in the motor lantern from pump
size 100 upwards

1) Balanced seal: 35 mm, non-balanced seal: 38 mm

Casing

Cast discharge casing with pump feet bolted below. The seal housings are separate components.

Stage casings, discharge casings and seal housings sealed with confined O-rings. Slightly elastic or non-elastic sealing rings (PTFE etc.) can be installed.

Standard flange designs

| Material variant | EN | | ASME Class | |

2) for pump size 32: discharge flange DN 1/4" can also be supplied with DN 1 1/2", if requested

Other flange machining variants on request.

Drive

By three-phase squirrel cage motor, types of construction:

Installation types A, B, C and D: IMB3

Installation types E F: IMV1 up to 45 kW,
>45 kW IMB 35

Installation type V: IMV1

Enclosure: IP 55/IP 23

Thermal class: F

Direction of rotation:

Installation types A, B, C, E, F, V clockwise, viewed from the drive end

Installation type D counterclockwise, viewed from the drive end

Options: special voltages,
explosion proof, PTC
resistors

Couplings

Flexible couplings without/with spacer. Others on request.
Close-coupled pumps up to DN 65 with rigid coupling;
> DN 65 with flexible couplings without spacer sleeve.

Coupling guard

to EN 294.

Tread-proof coupling guard possible.

Baseplates

Sectional steel, welded or U-rails for complete unit (pump and motor).

Close-coupled units are supplied with two U-rails for easier installation.

Documentation

Printed documents matched to CE requirements

- Dealers' catalogue 1777.178
- Dimensions tables 1777.3
- Installation plan 1777.39..
- Operating instructions 1777.8
- Performance curve booklet 50 Hz 1777.450
- Performance curve booklet 60 Hz 1777.460

General assembly drawing with list of components

CD

Inspections/Certificates

Standard without special certificates:

Hydrostatic internal pressure test of pressure-retaining components:
Discharge casing, stage casings, suction casing and seal housing at least 1.3 times the max. internal operating pressure.

On customer's request

Material tests:

- Test report 2.2 to EN 10204 for the components as per QCP ZN 58014

At extra charge

- Test certificate 3.1B to EN 10204.
- Dimensions check
- Coating inspection
- Final inspection
- Strip test
- Hydrostatic pressure test of pressure-retaining components

Hydraulic performance tests:

- Hydraulic performance test to ISO 9906
- NPSH-test

Other tests available:

- Balancing test
- Vibration test

Guarantee conditions

The duty point shall be limited to the area defined by the performance curve. The minimum flow rate specified in the quotation must be observed.

Pump operation outside the performance curve range may cause destruction of the pump set and loss of warranty.

The NPSH values given in the performance curve booklet correspond to the inception of cavitation. They apply to cold water without any gases.

To allow for measuring tolerances and production-related scattering, a margin of 10 %, but not less than 0.5 m must be taken into account.

The total heads and outputs apply to liquids with a density of $\rho = 1.0 \text{ kg/dm}^3$ and a max. kinematic viscosity ν of $20 \text{ mm}^2/\text{s}$.

Forces and moments

Multitec pumps are designed in such a way that they can withstand forces and moments in acc. with ISO 5199.

Noise characteristics

| Rated power input P_N (kW) | Sound pressure level L_{pA} (dB) ¹⁾ | | | |

| 250.0 | 75.0 | 77.5 | | |
| 315.0 | 75.5 | 78.0 | | |

1) Measured at a distance of 1 m from the pump outline (as per DIN 45635, Parts 1 and 24)

The design department must always be consulted when noise levels have to be guaranteed.

Noise characteristics for higher power ratings on request.

Coating/Preservation

(to AN 1865)

Material variant

| | | | | | | |
|-------------------------|-----------------------------------|-----------------|---|---|---|---|
| 10/11/12/13/20/21/25/26 | $\leq 140 \text{ }^\circ\text{C}$ | R | 6 | 6 | 6 | T |
| 20/21 | $> 140 \text{ }^\circ\text{C}$ | N ¹⁾ | 7 | 7 | 7 | T |
| 22/23/30 | $\leq 140 \text{ }^\circ\text{C}$ | N | 6 | 6 | 6 | U |
| 22/23/30 | $> 140 \text{ }^\circ\text{C}$ | N | 7 | 7 | 7 | U |

Key:

Treatment of unmachined parts

Coating - pressure-retaining components

Coating - bearing bracket, baseplate

Coating - motor

Preservation after test run

R = reaction primer, all parts and surfaces

N = reaction primer, wetted components without first primer coat (internal and external)

6 = synthetic enamel (water-dilutable) RAL 5002 - ultramarine blue

7 = heat-resistant paint RAL 9007 - aluminium grey

T = flushed with drinking water compatible preservation liquid

U = untreated, blank parts liable to rust treated with protective coating / water repellent.

1) for R impellers

Recommended stock of spare parts for two years' operation acc. to DIN 24 296

| Part no. | Description | Number of pumps (including stand-by pumps) | | | | | | |
|--|--------------------------------------|--|---|---|---|---------|---------|-------------|

| 523 | Shaft sleeve (set) | 2 | 2 | 2 | 3 | 3 | 4 | 50 % |

1) Pump sizes 125 and 150 only, and casing wear ring in suction casing for pump sizes 32 to 100 of material variants 20 to 30.

2) Only pump sizes 32 up to 100

3) The parts 461 and 524 are not installed
4) Parts form a subassembly with part no. 520
5) Part 381 forms a subassembly with part 529

Nozzle Positions

Nozzle positions are variable. The nozzle position required must be entered in the selection software when ordering.

N.B.! Nozzle position 0-0 (or fig. 2 for vertical installation) is only possible for all pump sizes and material variants from the third stage upwards! Exception: DN 150 in material variants 10, 11 and 12: on these pumps, nozzle position 0-0 is possible **from the second stage upwards!**

Nozzle positions are defined as viewed from the drive end.

1. Horizontal installation (A, B, C, D, E and F)

The first letter defines the position of the suction nozzle, the second letter that of the discharge nozzle.

Nozzle positions on horizontal pumps:

A = axial suction nozzle

0 = suction and/or discharge nozzle on top

R = suction and/or discharge nozzle on the right

L = suction and/or discharge nozzle on the left

Examples of nozzle position codes in the selection software:

A - 0

0 - 0

L - 0

R - L

2. Vertical installation

The suction nozzle (bottom) is regarded as a fixed point. The illustration number indicates the displacement of the discharge nozzle versus the suction nozzle.
